High-praise Exam Dumps Questions grant you success by high pass rate - ITPassLeader

**Exam** : **1z0-1085-25**

**Title** : Oracle Cloud Infrastructure  
2025 Foundations Associate

**Vendor** : Oracle

**Version** : DEMO

**NO.1** Why might you choose to use containers instead of virtual machines?

- A. Containers provide better isolation than virtual machines.
- B. Containers allow for faster startup time and more efficient resource usage.
- C. Containers require more resources to run.
- D. Containers are less flexible in terms of resource allocation.

**Answer:** B

Explanation:

Containers share the host operating system's kernel, leading to quicker startup times and lower overhead compared to virtual machines. They offer more agility and resource efficiency, making them suitable for scalable applications.

**NO.2** In the Oracle Cloud Shared Security Model, what is Oracle responsible for?

- A. Configuring IAM policies for all customers automatically
- B. Controlling user access policies within customer accounts
- C. Securing customer data stored in Object Storage
- D. Managing and securing the physical infrastructure and underlying cloud services

**Answer:** D

**NO.3** Which feature is NOT provided by Oracle Cloud Infrastructure Security Zones?

- A. Restricting resource creation based on predefined security policies
- B. Automatically enforcing security best practices
- C. Storing and managing encryption keys and secrets
- D. Continuous monitoring of security posture

**Answer:** C

Explanation:

Storing and managing encryption keys and secrets is not a feature provided by Oracle Cloud Infrastructure Security Zones. This functionality is typically handled by other services such as Oracle Key Management Service (KMS) or Vault.

**NO.4** What is an availability domain in Oracle Cloud Infrastructure?

- A. A set of virtual cloud networks
- B. A localized geographical area
- C. A type of encrypted traffic
- D. One or more data centers located within a region

**Answer:** D

Explanation:

An availability domain in Oracle Cloud Infrastructure refers to one or more data centers located within a region. Each availability domain is isolated from the others, with its own power, cooling, and networking to ensure fault tolerance and reliability.

**NO.5** Which type of load balancing policy is supported by Oracle Cloud Infrastructure Load Balancer?

- A. Random
- B. Weighted Round Robin
- C. Round Robin

**D. Weighted Least Connection**

**Answer:** B

Explanation:

Weighted Round Robin is a load balancing policy that distributes traffic based on weights assigned to backend servers. It provides more control over traffic distribution, allowing higher-weighted servers to receive more requests.
