- A. Participating databases must be ANSI-compliant.
- B. Participating databases must have buffered logging.
- C. Participating databases must have unbuffered logging.
- D. Participating database must have identical transaction logging types.

Answer: D

NO.5 What is the EXECUTE IMMEDIATE statement used for?

- A. To dynamically execute a SELECT statement.
- B. To execute dynamically composed SQL statements.
- C. To return a result set immediately from the statement.
- D. To execute a particular SQL statement with a higher priority.

Answer: B

NO.6 Assuming you have an employee table that stores the salary for each employee. What will this query return?

```
SELECT AVG(salary), STDEV(salary) FROM employees;
```

- A. Average salary and standard deviation for all rows.
- B. Average salary and standard deviation for all rows not containing NULL salaries.
- C. Average salary and standard deviation for all rows assuming zero for NULL salaries.

D. Average salary and standard deviation for all rows assuming the average value for NULL salaries.

Answer: B

NO.7 Which languages are supported by Informix in the development of User-Defined Routines (UDRs)?

A. Java, C and Stored Procedure Language (SPL)

B. SQL, .NET and php

C. Perl, Ruby, Python

D. None. Informix uses a proprietary language to develop UDRs

Answer: A

NO.8 How can you prevent concurrency problems when other users are modifying a nonlogging or raw table?

A. Lock the table in exclusive mode for the whole transaction OR use repeatable read isolation level for the whole transaction.

B. Lock the table in exclusive mode for the whole transaction OR use committed read isolation level for the whole transaction.

C. Lock the table in shared mode for the whole transaction OR use repeatable read isolation level for the whole transaction.

D. Lock the table in shared mode for the whole transaction OR use committed read isolation level for the whole transaction.

Answer: A

NO.9 Which two statements are true for built-in functions? (Choose two.)

A. You cannot overload the functions.

B. All functions require at least one argument.

C. The function is evaluated for each row in the query.

D. You cannot specify the function as the default column value.

E. The function can be used in both SQL statements and shell scripts.

Answer: B,C

NO.10 Which data type's internal structure is inaccessible to the database server?

A. SET

B. Opaque

C. ROW Named

D. ROW Unnamed

Answer: B
